Summertime is Patio Heater Time!

Qualitec offers more choices for outdoor heating

Here in Alberta our outdoor season seems all to brief, given the vagaries of our climate. With all the hoopla associated with climate change, our summers don't seem to be getting any longer, by my measure. So when Albertans finally get the chance to venture outdoors for recreation and entertainment, its like a dam bursting as we head to the great outdoors before it snows again!

More attention is given to our outdoor decks and patios these days, as we endeavour to make them comfortable and attractive places to

entertain and simply relax. Witness the growth of the 'outdoor room' concept, with complete kitchens, outdoor dinettes and furniture of all styles growing in popularity with homeowners to accessorize their outdoor living areas so that they may enjoy the outdoors as much as possible - until the sun goes down and it gets chilly—time for some heat!

That's where we come in, with several good choices and options to warm up the outdoor room of today.

Many decks and patios have lower ceilings beneath top decks which have traditionally been difficult to heat with conventional gas fired patio heaters due to the normally high top clearances required by gas fired patio heaters. That's where our Infratech electric radiant heaters really shine, with smaller

overall profiles and lower top clearances - ideally suited to lower ceiling spaces.

Featured inside are product profiles on our family of

outdoor heating products, including:

- ◆ Infrared Dynamics Sunglo & Sunpak
- ◆ Infratech Electric Radiant
- ◆ IR Energy Evenglo
- ◆ Superior Radiant Outdoor Tubes

Shown above is a rustic cottage patio heated with Infratech electric units. Makes you want to sink into a chair and relax, doesn't it!

Infrared Dynamics

Sunpak TSR 2 Stage remote controlled

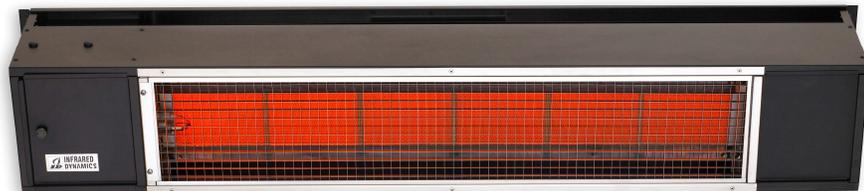

Introduced last season, the new Sunpak all stainless steel model TSR heater incorporates a hand held remote control to switch the heater between high and low fire, and on/off. Also included is a wall mount control with the same features (in case you lose the remote!).

The Stainless steel version of the Sunpak has also been given an optional curved 'face trim kit' to

give the heater a more contemporary look. The Sunpak TSR two stage comes complete with a 7.5V power supply transformer whose low voltage leads can be extended dozens of feet if required to reach a 115V plug in in a more weather proof area of a home, for example. This makes electrical installation much easier!

Already a popular choice with customers, call us today for more info!

IR Energy Expanding Product Line

Qualitec is proud to offer the ever growing line of outdoor infrared heating products available through IR Energy, a subsidiary of Superior Radiant Products.

Created to offer dedicated outdoor infrared heating products, IR Energy has striven to apply the same sound engineering principles, the hallmark of SRP indoor infrared heating products, to the outdoor theatre.

Beginning with the uniquely different Evenglo 'mushroom' style heater which has no comparison in the marketplace, IR energy has added Eventube dedicated outdoor tube heaters, and Varma electric infrared outdoor heaters to their line up.

Evenglo - More Styles & Models

Evenglo has added LPG portable versions shown here in stainless steel and black, to which custom colours can be applied to any special order.

Shown below is an Eventube model in a cool outdoor setting.

Varma Electric Infrared Heaters

IR energy has added the durable Varma electric infrared heater to its line-up of outdoor heating products. Available in a sealed, glazed stainless steel cabinet, this heater can withstand even the most nasty seaside environments and provide years of reliable service due to its robust construction.

Electric Infrared Patio Heaters

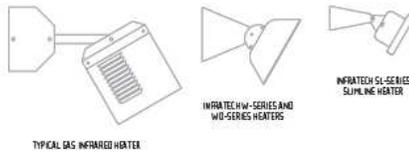

Infratech sets the standard for electric outdoor heaters

In natural gas rich Alberta we usually scoff at electric heaters, yet where outdoor heating comes into play, sometimes Infratech electric infrared heaters are simply the best choice. Lower ceilings, fully modulating controls, integration with home electronic management systems, custom colours and unobtrusive installation are but some of the reasons Infratech may suit your project. Call Qualitec today for advice and product selection.

Infratech heaters have a smaller, sleeker profile than typical gas infrared heaters

Sunglo - The Original Patio Heater

Designed as a deck heater for southern Californian swimming pools many years ago, the Sunglo, invented by Infrared Dynamics, created a heating product category that has been followed by many others, especially in the past ten years.

When it comes to quality, performance, and most importantly, availability of replacement parts, Sunglo sets the standard for the industry.

Two Stage Heaters

Now available is a two stage gas train for the E Series A244 shown here! Call us today for more info.
